

**REMARKS**

Claims 1-10, 12-30, and 32-41 are pending in this application.

Applicants have amended claims 1, 9, 13, 20, 22, 27-29, 33, and 40 herein. These changes do not introduce any new matter.

Applicants respectfully request reconsideration of the rejection of claims 1-8, 20-23, and 25 under 35 U.S.C. § 102(e) as being anticipated by *Collart* (U.S. Patent No. US 6,453,420 B1). As will be explained below, the *Collart* reference does not disclose each and every feature of independent claims 1, 20, and 22, as amended herein.

Applicants have amended each of independent claims 1, 20, and 22 to specify that the auxiliary media content items are comprised of advertisements. The *Collart* reference does not disclose the distribution of advertising-related media content. Thus, for this reason, as well as the reasons previously set forth during the prosecution of this application, the *Collart* reference does not disclose each and every feature of claims 1, 20, and 22, as amended herein.

Accordingly, independent claims 1, 20, and 22 are patentable under 35 U.S.C. § 102(e) over *Collart*. Claims 2-8, each of which ultimately depends from claim 1, claim 21, which depends from claim 20, and claims 23 and 25, each of which depends from claim 22, are likewise patentable under 35 U.S.C. § 102(e) over *Collart* for at least the same reasons set forth regarding the applicable independent claim.

Applicants respectfully request reconsideration of the rejection of claim 26 under 35 U.S.C. § 103(a) as being unpatentable over *Collart*. Claim 26 depends from independent claim 20, which has been distinguished from the *Collart* reference herein (see the above discussion of the anticipation rejection of claim 20 based on the *Collart* reference). As the Examiner has not identified any additional teachings that address the deficiencies of the *Collart* reference relative to claim 20, Applicants submit that both claim 20 and claim 26, which depends from claim 20, are patentable under 35 U.S.C. § 103(a) over *Collart*.

Applicants respectfully request reconsideration of the rejection of claims 27, 28, 40, and 41 under 35 U.S.C. § 103(a) as being unpatentable over *Hoffberg et al.* (U.S. Patent No. US 6,400,996 B1). As will be explained below, the *Hoffberg et al.* reference would not have suggested to one having ordinary skill in the art the subject matter defined in independent claims 27, 28, and 40, as amended herein.

The *Hoffberg et al.* reference discloses an adaptive pattern recognition based control system. Each of claims 27 and 28, as amended herein, requires the creating of a record of playback of at least one auxiliary content item comprised of an advertisement, and the uploading of the playback record to a server. The Examiner asserts that these features are suggested by the disclosure in the *Hoffberg et al.* reference at column 63, lines 12-18. This portion of the *Hoffberg et al.* reference merely states that the disclosed system and method includes “an accounting system which communicates information relating to receipt of commercial advertising information by a recipient to a central system for determination of actual receipt of information. This feedback system allows verification of receipt and reduces the possibility of fraud or demographic inaccuracies.” Applicants respectfully submit that this disclosure would not have suggested a system and method that creates a record of *playback* of auxiliary content items, because it merely relates to receipt of commercial advertising information (with no mention of playback). As such, for at least this reason, the *Hoffberg et al.* reference would not suggested to one having ordinary skill in the art the subject matter defined in claims 27 and 28.

Regarding claim 40, the cited portions of the *Hoffberg et al.* reference relied upon by the Examiner (column 60, lines 10-17, column 62, lines 50-68, column 63, lines 12-24, and column 64, lines 39-43) do not unambiguously teach or suggest a download management server that receives a record indicating playback of an auxiliary content item, and accumulates the playback record to assess a fee to an auxiliary content provider. As such, the *Hoffberg et*

*al.* reference would not have suggested to one having ordinary skill in the art the server network defined in claim 40.

Accordingly, independent claims 27, 28, and 40, as amended herein, are patentable under 35 U.S.C. § 103(a) over *Hoffberg et al.* Claim 41, which depends from claim 40, is likewise patentable under 35 U.S.C. § 103(a) over *Hoffberg et al.* for at least the same reasons set forth regarding claim 40.

Applicants respectfully request reconsideration of the rejection of claims 9, 10, 12-19, 24, and 29, 30, and 32-39 under 35 U.S.C. § 103(a) as being unpatentable over *Collart* in view of *Hoffberg et al.* As will be explained below, the combination of *Collart* in view of *Hoffberg et al.* would not have suggested to one having ordinary skill in the art the subject matter defined in independent claims 9, 13, 22, 29, and 33, as amended herein.

Considering first claim 9, Applicants have amended this claim to specify that the auxiliary media content is comprised of advertisements. As discussed above, the *Collart* reference does not relate to the providing of advertising-related media content. As such, Applicants respectfully submit that the teachings of the *Collart* reference cannot be fairly considered to relate to the providing of the claimed auxiliary media content. Thus, for at least this reason, Applicants respectfully submit that the combination of the *Collart* and *Hoffberg et al.* references in the manner advanced by the Examiner is improper.

In addition, claim 9 requires, among other things, the storing of a record of auxiliary content viewed using the client console, and the uploading of this record to a download management server. In support of the obviousness rejection, the Examiner asserts that the *Collart* reference discloses at column 24, lines 7-9, the storing of a record regarding the viewing of auxiliary content and the uploading of this content to a download management server. This portion of the *Collart* reference merely states that “a transaction is posted to the server database that memorializes the events associated with the unlock operation 1660.” The

posting of information regarding an unlock operation neither constitutes nor suggests the storing of a record regarding viewed auxiliary content in the primary media content/auxiliary media content environment specified in claim 9. As the *Hoffberg et al.* reference does not cure this deficiency of the *Collart* reference, the combination of these references would not have suggested to one having ordinary skill in the art the subject matter defined in claim 9, as amended herein.

Turning to claim 13, Applicants have amended this claim to specify that the auxiliary content is comprised of advertisements. Among other things, claim 13 also specifies 1) that the detachable storage media has auxiliary content stored thereon, and 2) that the comparing of the user information includes comparing the user information with trigger data logically associated with an auxiliary content item stored on the detachable storage media. The arguments made above with respect to claim 9 also apply to claim 13. In addition, neither the *Collart* reference nor the *Hoffberg et al.* reference discloses or suggests the comparing of user information with trigger data logically associated with an auxiliary content item in a primary media content/auxiliary media content environment as specified in claim 13. Thus, for at least these reasons, the combination of *Collart* in view of *Hoffberg et al.* would not have suggested to one having ordinary skill in the art the subject matter defined in claim 13, as amended herein.

Regarding claim 22, Applicants have amended this claim to specify that the plurality of auxiliary content items is comprised of advertisements. As discussed above, the *Collart* reference does not disclose a console having logic for receiving primary content and user information from a server and loading an auxiliary content item selected from a plurality of auxiliary content items stored in a storage media, with the selected auxiliary content item being associated with trigger data corresponding to user information so that the auxiliary content item is customized to the user information. The *Hoffberg et al.* reference does not

cure this deficiency of the *Collart* reference relative to claim 22. Thus, for at least this reason, the combination of *Collart* in view of *Hoffberg et al.* would not have suggested to one having ordinary skill in the art the subject matter defined in claim 22.

Addressing next claims 29 and 33, Applicants have amended each of these claims to specify that the auxiliary content is comprised of advertisements. In addition, among other things, claim 29 specifies that the accessing of the auxiliary content includes comparing the user information with trigger data logically associated with one or more auxiliary content items making up the auxiliary media content. As discussed above, the *Collart* reference does not relate to the providing of advertising-related media content. In addition, the arguments made with respect to claim 9 also apply to claims 29 and 33. Thus, for all of these reasons, the combination of *Collart* in view of *Hoffberg et al.* would not have suggested to one having ordinary skill in the art the subject matter defined in claims 29 and 33, as amended herein.

Accordingly, for at least the foregoing reasons, independent claims 9, 13, 22, 29, and 33 are patentable under 35 U.S.C. § 103(a) over the combination of *Collart* in view of *Hoffberg et al.* Claims 10 and 12, each of which depends from claim 9, claims 14-19, each of which ultimately depends from claim 13, claim 24, which depends from claim 22, claims 30 and 32, each of which depends from claim 29, and claims 34-39, each of which ultimately depends from claim 33, are likewise patentable under 35 U.S.C. § 103(a) over the combination of *Collart* in view of *Hoffberg et al.* for at least the same reasons set forth regarding the applicable independent claim.

In view of the foregoing, Applicants respectfully request reconsideration and reexamination of claims 1-10, 12-30, and 32-41, as amended herein, and submit that these claims are in condition for allowance. Accordingly, a notice of allowance is respectfully requested. In the event a telephone conversation would expedite the prosecution of this application, the Examiner may reach the undersigned at (408) 749-6902. If any additional
